

KEEP TREES AWAY FROM ELECTRIC SERVICE DROPS

- 1 SERVICE DROP** - The small power line between the electric pole and the house.
- 2 ELECTRIC METER** - The round device that measures the electricity you use.

Homeowners should keep trees away from electric service drops to avoid damage from falling limbs during adverse weather. Please note, like most utilities, DTE Energy does not trim or remove trees that interfere with the lines that run from the power line to customer homes. These lines do carry voltage so we recommend you hire a professional to complete this trimming.
